**Executive Summary:**

Energizing solutions is developing a software platform to reduce hospital readmissions caused by malnutrition, which costs the US healthcare system \$6 billion dollars per year. Dr. Chodosh is a geriatrician with over 20 years of health services research experience and Dr. Beasley is a nutritional epidemiologist who has received three Small Business Innovation Research awards from the National Institutes of Health for the development and evaluation of dietary assessment and intervention tools that resulted in 3 products and five scientific publications.

**Company History:**

Drs. Chodosh and Beasley began this innovative venture six months ago as an outgrowth of an unmet need identified through their academic collaborations.

**Market Opportunity / Unmet Need:**

In 2013, there were 371,900 hospital readmissions among malnourished adults over 65 years with an average cost of \$16,200 per readmission for a total cost of \$6 billion dollars per year to the US health care system. These costs will increase, as in the next 15 years, the US population over age 65 will increase by more than 50%.

**Products/Services – Launched & Pipeline:**

After launching our product to address protein/energy malnutrition, we will adapt the product for other conditions costly to the healthcare system.

**Commercial / Technical Milestones:**

N/A

**Intellectual Property:**

N/A

**Competition:**

Our competitors have focused on developing products for weight loss rather than weight maintenance or weight gain and have not considered adaptations that would accommodate the unique needs of older adults.

**Financial Projections (Unaudited):**

By 2019, we project having 2,000 subscribers with an average duration of use of 6 months with a net income of \$595,000.
